DETAILED ACTION

This action is based upon the BPAI decision filed August 28, 2003. In that decision, the examiner was reversed for not providing evidence or analysis to support the claims lack utility within the technological arts.

Claim Rejections - 35 USC § 101

35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Claims 21-26 and 28-36 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter. The basis for this rejection is set forth in a two-prong test of:

- (1) whether the invention is within the technological arts; and
- (2) whether the invention produces a useful, concrete and tangible result.

For a claimed invention to be statutory, the claimed invention must be within the technological arts. Mere ideas in the abstract (.i.e., abstract idea, law of nature, natural phenomena) that do not apply, involve, use or advance the technological arts fail to promote the progress of science and the useful arts and therefore are found to be non-statutory subject matter. For a process, the recited process must somehow apply, involve, use or advance the technological arts. *In re Toma*, 575 F.2d 872, 877-78, 197 USPQ 852, 857 (CCPA 1978). Such is the case here. The present claimed invention does not involve, apply, and use any technology. The claims merely recite a human decision in the purchase of an item.

Also, the claims do not produce a useful, concrete, tangible result. As set forth in *AT&T Corp v. Excel Communications, Inc.*, 172 F.3d 1352, 1356, 50 USPQ2d 1447 (fed. Cir. 1999), the Federal Circuit noted "that any step-by-step process, be it electronic, chemical, or mechanical, involves an 'an algorithm' in the broad sense of the term." Also see *In re Warmerdam*, 33 F.3d 1354, 1359, 31 USPQ2d 1754, 1758 (Fed. Cir. 1994) which notes steps such as "computing", "determining", "cross-correlating", "comparing", "selecting", "initializing", "testing", "modifying" and "identifying" were found to implicitly recite the soloing of a mathematical algorithm. It is clear from this the above noted claims do recite an algorithm. However, claims 21-26 do not produce a useful, concrete or tangible result because the algorithm merely recites how a person decides which product to purchase.

Allowable Subject Matter

Claims 1-4, 6-16 and 18-20 are allowed.
